STRIMZI

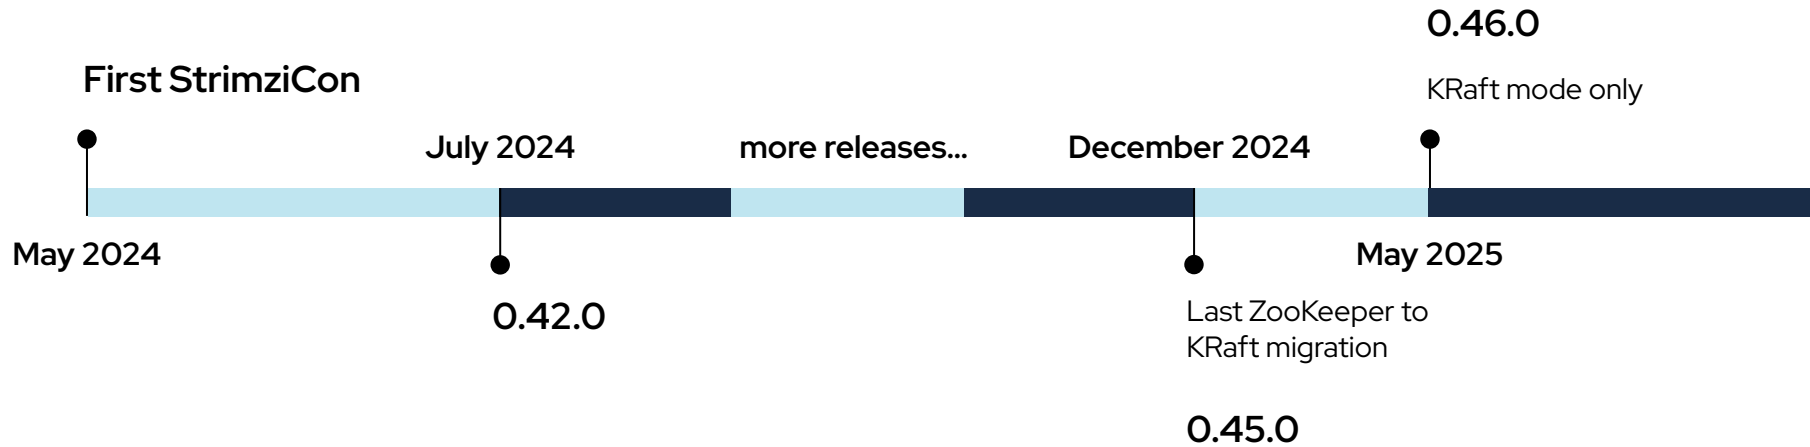

Simplifies the process of running Apache Kafka on Kubernetes

Secure by Default

Simple yet **Configurable**

Kubernetes-Native Experience

In the past year ...

Running Kafka Cluster

KRaft mode

- ZooKeeper no longer supported
- Unregistration of KRaft nodes on scale-down

Apache Kafka support

Several Kafka versions supported over time

Running Kafka Connect and MirrorMaker

Managing connector offsets in CRs

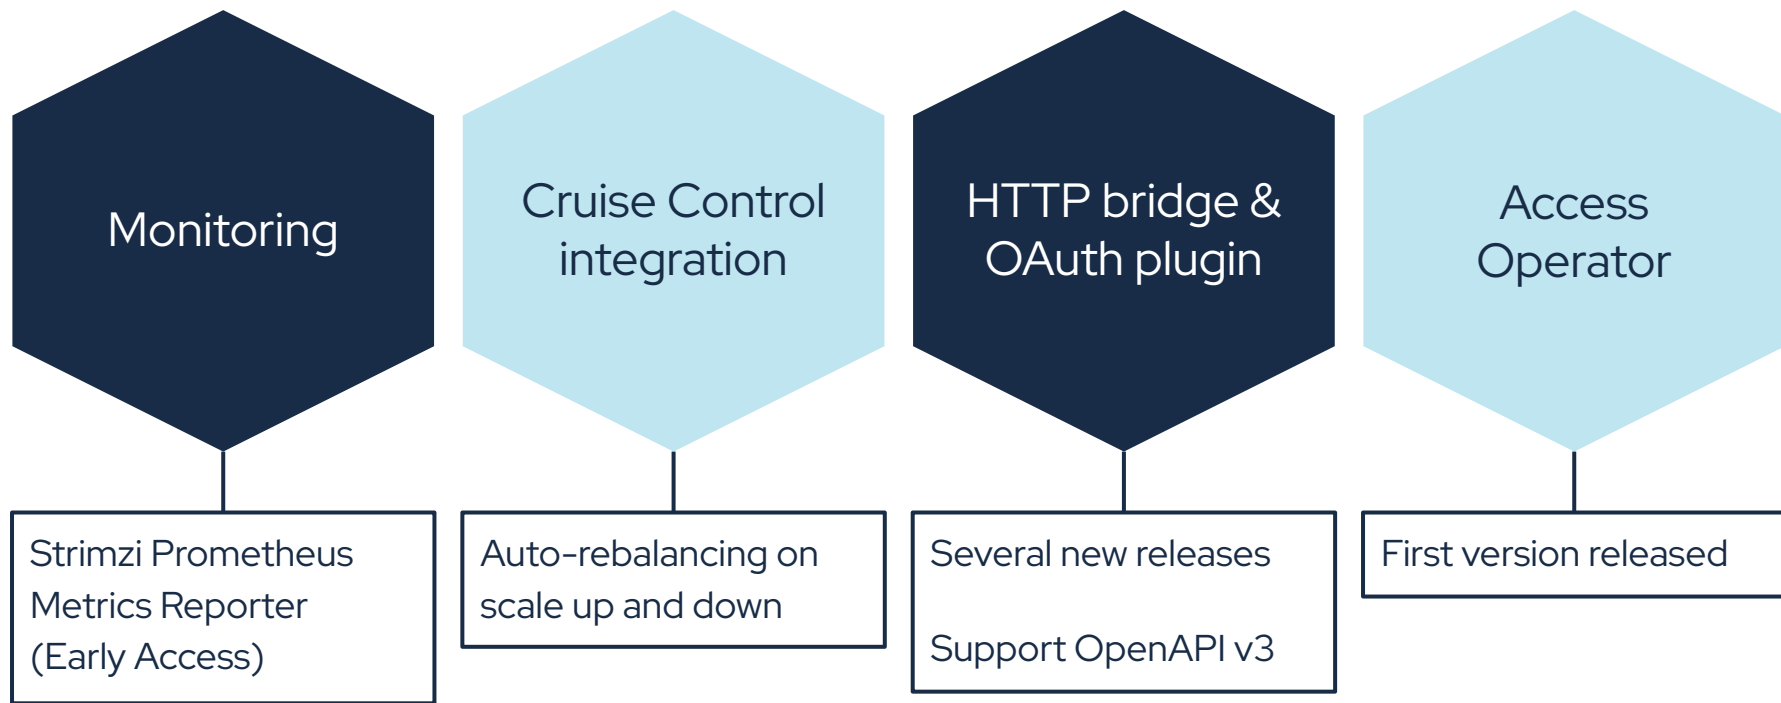

New health endpoint

MirrorMaker 1 removed

Certificate handling improvements

Kafka node certificates in separate Secrets

Fewer rolling updates

... the future!*

* we hope

All clusters in
KRaft Mode

cert-manager
integration

Self-healing with
Cruise Control

What do you
want to see?

What can you do to help?
